

Vector Institute

Driving excellence in machine learning and deep learning

September 2018

Atypical & Exciting Collaboration

The Vector Institute is an independent not-for-profit corporation dedicated to advancing the field of artificial intelligence through world-class research and applications in the areas of deep learning and machine learning.

Vector serves as the pillar of a thriving AI ecosystem by combining the strengths of institutions, enterprises, start-ups, and business incubators to help drive AI research and its adoption and commercialization across Canada.

Launched in partnership with the University of Toronto and with unprecedented funding and collaboration between governments and businesses across the Canadian economy

Located in the Toronto-Waterloo innovation corridor, which employs 205,000+ tech workers, second only to Silicon Valley in North America

Canadian Context

Canada has been a leader in AI research and education for years, specifically in the fields of deep learning, machine learning and reinforcement learning.

Major AI research and investment clusters have emerged around leading scientists and academic institutions in Toronto, Montreal and Edmonton.

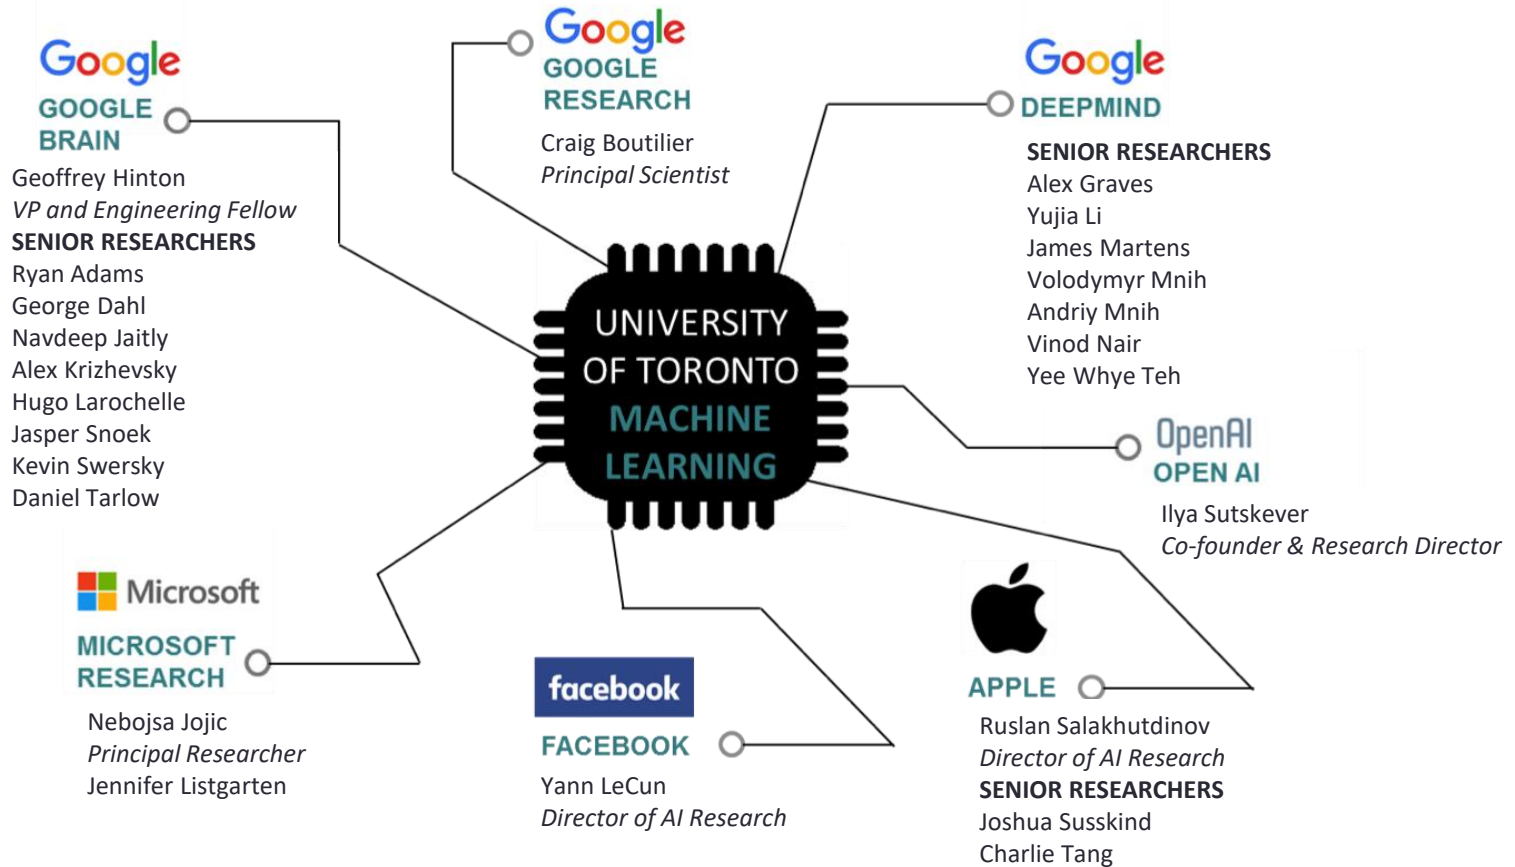

Robots controlled by remote supercomputers. Self-driving cars on narrow, winding streets. Board-game players of unimaginable skill. These successes of artificial intelligence (AI) rely on neural networks: algorithms that churn through data using a structure loosely based on the human brain, and calculate functions too complex for humans to write. The use of such networks is a signature of firms in Silicon Valley. But they were largely invented not in California but in Canada.

- The Economist, November 2017

Graduates from Canada: Highlights

Graduates from Canada have gone on to lead labs in the world's top technology companies.

The Great AI Awakening

Companies, governments and institutions in Canada are awakening to the opportunities presented by investments in AI and the quality of local talent.

All organizations are at different stages of realizing the power of AI and adapting their strategies to seize the opportunities presented by the future of AI research and applications.

Whether it's in corporate research labs, hospitals, traditional industry or innovative start-ups, the local demand for AI talent is greater than ever.

Recognizing this immense opportunity, Canadian academics, governments and businesses came together in an unprecedented collaboration to launch the Vector Institute earlier this year.

The Vector Institute and its partners will play a major role in meeting the demand for talent.

Vector is combining strengths across Canada's thriving AI ecosystem and building a complete AI value chain.

"An informal survey of companies in Toronto and the surrounding area found that local companies want to hire thousands of machine learning PhDs and Master's graduates in the next five years. This number is far greater than the number of graduates per year in all of Canada and that helped to validate the idea to create the Vector Institute."

- Jordan Jacobs, CEO, Layer 6 AI, Co-founder, Vector Institute

Vector: Vision & Mission

Vision

Vector will drive excellence and leadership in Canada's knowledge, creation, and use of artificial intelligence to foster economic growth and improve the lives of Canadians.

Mission

- Vector will lead Ontario's efforts to build and sustain AI-based innovation, growth and productivity in Canada by focusing on the transformative potential of deep learning and machine learning.
- Vector, together with its AI partners in other parts of Canada, will work with Canadian industry and public institutions to ensure that they have the people, skills, and resources to be best in class at the use of artificial intelligence.
- Vector will support Canada's innovation clusters in artificial intelligence and focus on helping start-ups grow to become Canadian-based global leaders.
- Vector will attract the best global talent focused on research excellence; Vector's researchers and academic partners will be part of a vibrant community of innovative problem solvers, working across disciplines on both curiosity-driven and applied research.

Why Now?

The possibilities, potential, and applications of AI are evolving rapidly, encompassing every industry.

AI is an area of scientific, academic, and commercial endeavour that will shape our world over the next generation, bringing changes large and small and in every facet of our lives from business to personal, from professional to leisure.

Organizations across Canada must be a part of the transformation and lead innovation, because the risks of not participating are simply too high.

Companies have a choice when faced with disruptive change: to react or proactively seize opportunities and contribute to a solution.

We have an opportunity to combine our strengths and build on the strong foundation of research in Canada.

There is global demand for AI talent; the cost and competition for this talent is high. Canadian governments and businesses have recognized the need to invest in AI and the local talent pool. They have come together in an unparalleled collaboration to support the creation of the Vector Institute and address challenges and opportunities.

Vector is Part of a Thriving Ecosystem

Located in Toronto, Ontario the Vector Institute is in one of three major AI centres in Canada.

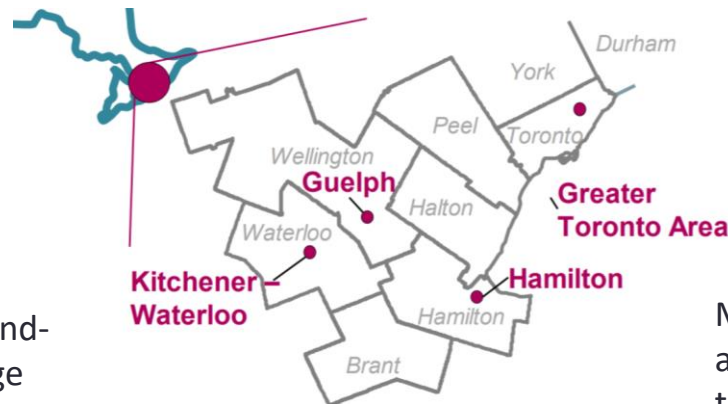

Toronto is Canada's most populous city and the fourth largest city in North America.

Ontario is home to more than 200 AI-enabled firms with a total of \$2.84B raised in 2016.

The Toronto-Waterloo innovation corridor employs 205,000+ tech workers, second only to Silicon Valley in North America.

Toronto is Canada's financial capital; the city has the second-highest concentration of large bank headquarters in the world and accounts for more than \$1.5 trillion in institutional investor capital.

Toronto-Waterloo Corridor

High concentration of AI start-ups, enabled by a strong start-up community, AI-focused incubators, and investors.

Multi-national corporations are also taking notice and expanding their R&D labs in Ontario including: General Motors, Google Brain, RBC's Borealis AI, Thomson Reuters Technology Centre, Uber ATG

Ontario is home to world-leading medical and health systems research.

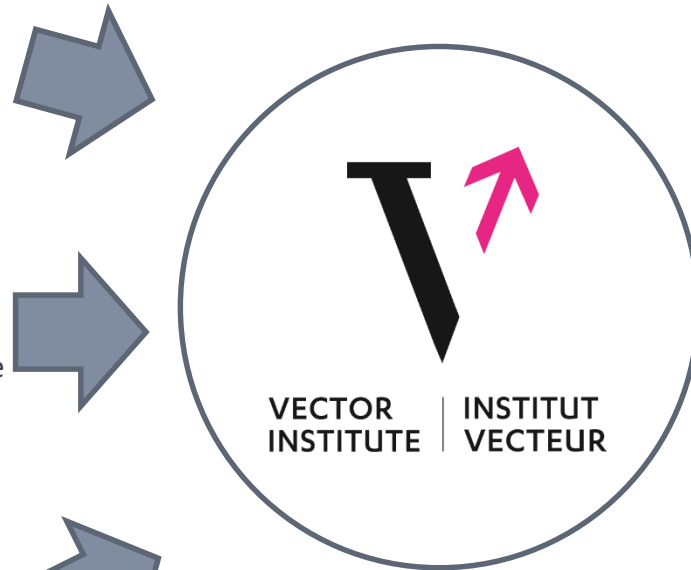

Funding: Sources and Uses

Funding sources: \$135 million in the first five years*

Federal funding through the Canadian Institute for Advanced Research (CIFAR) to support the Canada CIFAR AI Chairs Program, graduate training, institute operations, and the participation of the Chairs and trainees in national AI activities.

Provincial funding from the Government of Ontario to establish the institute, deliver core programming, and support the development of the AI ecosystem.

Industry sponsorships: Nearly 40 large, medium, and small companies collaboratively supporting a world-class research centre with expectations of access to research ideas and growth in the AI workforce.

Vector's priorities and activities are therefore focused on establishing a strong foundation for research excellence and receptor capacity for talent and ideas.

This includes growing and retaining a team of world-class Vector Researchers and supporting their research through the provision of computing resources, and funded students and postdoctoral fellows.

Vector Engages a Growing Canadian AI Ecosystem

In addition to working closely with its funding partners, Vector is building strategic relationships and connections among leading organizations whose expertise can help advance Vector's vision and mission.

Vector Activities

Increasing the supply of AI talent by training more students, training industry professionals, and presenting opportunities for the two to network.

Providing flexibility for researchers to pursue work in an environment that is focused on both pure and applied research.

Leveraging Canada's strong history of AI research to continuously attract new talent and new investment, thereby boosting the knowledge economy.

Combining strengths across the innovation ecosystem in Toronto and Canada by bringing together universities, governments, start-ups, scale-ups, incubators, accelerators, VCs, and enterprises.

Vector will work with Ontario's world-renowned medical research centres on projects that will increase the accessibility of health data to world-class machine learning researchers, enabling the widespread application of machine learning in health care.

"The establishment of the Vector Institute has generated great interest and excitement, spurring interest from industry and attracting top global talent in machine learning and deep learning. Canada has the potential to become a global leader in advancing AI research, development and commercialization, and all of Canada stands to benefit as a result. I'm a proud Canadian who graduated from the University of Waterloo. I am excited about returning home to help lead these efforts with the Vector Institute."

- Garth Gibson, President & CEO

Specialization in Deep Learning

Artificial
Intelligence

Machine
Learning

Deep
Learning

Generally speaking, artificial intelligence refers to computers that can learn about the world flexibly, make inferences about what they see and hear, and achieve human-like understanding of information. Artificial intelligence involves capacities like visual and auditory perception, the ability to read and to make sensible decisions, and the power to make accurate predictions based on existing knowledge.

Machine Learning

Machine learning algorithms give computers the power to learn and recognize patterns the way people do, without requiring specific and repetitive instructions for each new piece of data.

Deep Learning

Deep learning is a subfield of machine learning. Many other types of machine learning work well with limited data sets, but deep learning alone appears to continuously improve as the machine absorbs more and more data.

Appointments and Affiliations

Vector researchers have appointments in several Canadian institutions.

Vector will expand its collaborative network with affiliates from Canadian universities, institutions, and industry, as well as students who are enthusiastic about sharing and gaining expertise.

“Here in Canada, and especially in Toronto, we have a strong history of research in machine learning and deep learning. With the Vector Institute, we are building on those strengths and seizing a moment in which top talent and businesses want to come to Canada to advance artificial intelligence. As Research Director, my top priority since Vector’s launch has and continues to be to build a talented, collaborative team. I am thrilled that we are continuing to grow a diverse team of faculty committed to making Vector a global leader in AI.”

Real World Problems and Data

In addition to advancing foundational research, Vector researchers have the opportunity to interact with Vector's industry sponsors where their interests are aligned. Businesses are eager to share their technical challenges to stimulate Vector research and increase its applicability.

Data

Vector has plans to host data from Vector's sponsors for research purposes. Researchers will be able to access this data to apply machine and deep learning techniques, train systems, and extract valuable insights.

Endless Summer School

Vector's flagship Endless Summer School program – a collaborative, interactive lecture series – brings together engineers, computer scientists and other technically-skilled professionals from Vector's industry sponsors to learn about the latest advances in AI research.

Integrating Industry into the Ecosystem

The Vector Institute is ramping up its academic and industry programming.

Current & Planned Activities

Machine Learning Advances and Applications Seminar

The seminar regularly brings together hundreds of students and researchers who come to hear from the world's top academic and industrial data scientists in machine learning and AI.

Pitch Days

Networking event where smaller AI companies present their capabilities to Vector's enterprise-level sponsors

Industry Training

Providing support to enable companies to strategize around AI

Training programs for industry professionals to go back to school for a short time and specific courses

Recent speakers:

Industry Sponsors

Vector's industry sponsors reflect the broad, transformational potential of deep learning and machine learning and represent sectors as diverse as health care, finance, insurance, education, retail, advanced manufacturing, construction and transportation. Vector's sponsors are Canadian companies or international companies with a Canadian research presence.

They are active in the AI community and are eager to learn about what AI can do for their businesses.

Come Join Us!

Research Scientists & Postdoctoral Fellows

The Vector Institute is building its team of Research Scientists and Postdoctoral Fellows who will have opportunities to contribute by:

- working and collaborating with other members of the Institute
- engaging in state-of-the-art research
- publishing at the highest international level
- contributing to the academic life and reputation of the Institute
- determining strategic areas of research

Vector also encourages its team to:

- develop entrepreneurial activities and interact with industry
- teach at summer schools offered by the Institute
- teach graduate and undergraduate courses at a university

Students

Students affiliated with the Vector Institute will be full-time graduate students at an affiliated Canadian university. The Vector Institute is not a degree-granting institution. Vector will partner with universities towards a goal to graduate 1,000 professional applied Master's students in AI-related fields in Ontario per year within five years.

Toronto: “The Views are Different Here”

The **most diverse population in the world**. More than half of the region’s 6.4 million residents are foreign-born – a higher percentage than most global cities, including New York.

The Toronto-Waterloo Innovation Corridor employs **205,000+ tech workers**, second only to Silicon Valley in North America.

Leading North America on almost every important **quality of life** metric: safety, crime, healthcare, education, housing, culture, and entertainment.

Highly connected across **all modes of transportation**: plane, train, car, subway, or bike. Huge volumes of people move efficiently across all transit options every day, multiplying possibilities when it comes to choosing where to live.

Toronto’s Pearson International Airport is the **second largest international airport in North America**; travel to some of the largest U.S. markets, including New York, Boston, Chicago and Washington, all within a 90-minute flight.

Welcoming more than **100,000 new immigrants every year** – 40% of Canada’s total immigration inflow. Governments work in concert to encourage immigration among **highly-skilled international talent**.

“Increasingly, the world’s most promising researchers in deep learning and other AI subfields are looking at Canada as a hub with many opportunities to collaborate, advance research and develop applications. Vector is a pillar of the Canadian AI ecosystem and I’m very excited that the team is expanding with highly sought-after talent, some of whom I’ve had the pleasure of working with. This team will drive Vector’s excellence in research, education and industry collaboration.”

- Geoffrey Hinton, Chief Scientific Advisor,
