SYSTEMS LAB

Introduction

Goal - Design provably safe controllers for executing complex control specifications

1) Safety constraints

2) Temporal logic specifications

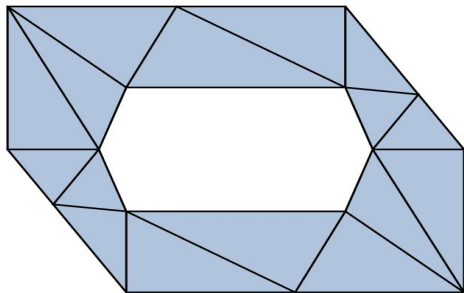

Motivating Example

Standard tracking (sinusoidal reference)

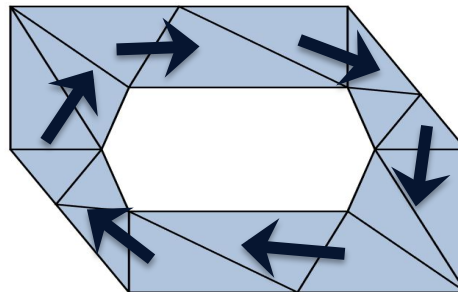

Hybrid Control Methodology

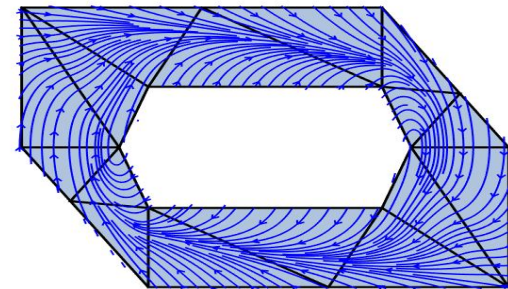

1) Triangulation

2) Sequencing of triangles

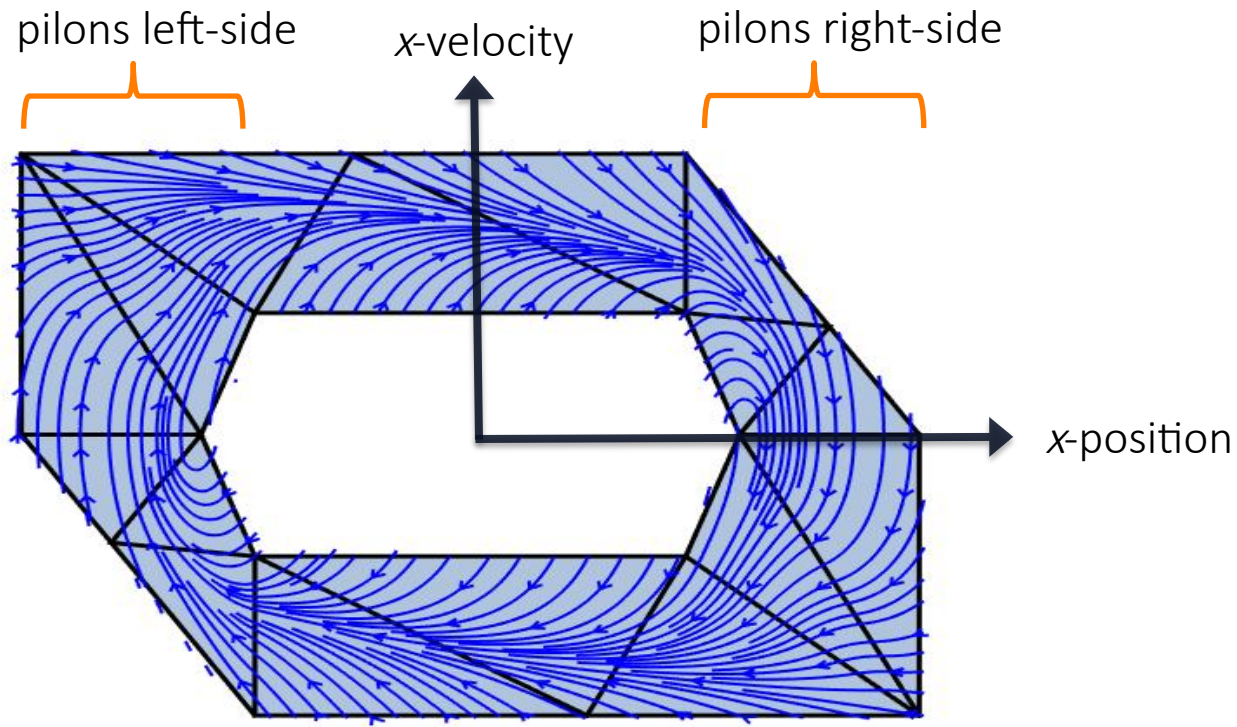

3) Low-level control synthesis (Reach Control)

M. Kloetzer and C. Belta, “A fully automated framework for control of linear systems from temporal logic specifications,” 2008.

B. Roszak and M. E. Broucke, “Necessary and sufficient conditions for reachability on a simplex,” 2006.

Resulting Design for Quadcopter Maneuver

Proposed approach
